

COLOR INTERMEDIATE FILMS

KODAK VISION Color Intermediate Film (ESTAR Base) 2242/3242

A color intermediate film for the preparation of color master positives from color negative originals for release printing, for mastering videocassette, DVD, and digital cinema releases, and for making color duplicate negatives from the master positives. KODAK VISION Color Intermediate Film is available in remjet acetate and non-remjet ESTAR Base and offers excellent sharpness for digital outputs. This film can be used for the preparation of color duplicate negatives from black-and-white silver separation positives.

"I prefer to make my projects on film because the integrity of the colors is superior and it renders a more emotional feeling. That means the audience is more easily drawn into the story and less likely to be aware that they are watching a movie."

— **Ho Ping, writer-director**

EASTMAN Color Internegative II Film (ESTAR Base) 2272/3272

This remjet backed, polyester base color film is used for making internegatives from color reversal originals. The resulting color internegatives are made using Process ECN-2 and then printed on KODAK VISION Color Print Film.
