Improved KODAK ACCUMAX Rapid Access Developer and Replenisher

KODAK ACCUMAX Rapid Access Developer and Replenisher CAT No. 8875569, has been improved for cleaner-working performance compared to current product. This high-performance rapid access developer, for use with KODAK ACCUMAX and PRECISION LINE Films, is concentrated and dilutes 1:2 for all applications. Lightweight 5 L plastic bottles are easy to handle for mixing replenisher and filling the processor. Bottles are designed for cleanroom environments used in the PCB applications. Manufactured in ISO registered facilities to the highest quality specifications. Bottles are stamped with a 2-year expiration date to ensure consistent quality.

Introduction of the improved formula will be on a stock turn over basis beginning in February. Customers can use the improved formula under the same conditions, and intermix both current and improved product in the same process. Clean-working benefits will not appear until complete conversion to the improved product and a systems clean of the processor has been performed.

Catalog numbers will remain unchanged.
