

Qualified Thermal Media Bulletin

Internal: 750-00340J-EN Rev U

Release date: March 1, 2024

Overview

This document lists thermal media that are qualified for use on Kodak thermal CTP systems, with specific information regarding the different plate handling options available. This document only contains currently available CTP devices. For legacy devices, and for plate throughput estimates and qualified screens, see the CTP Media Imaging Performance Database.

If a media is not listed in this document, it is not qualified on Kodak CTP systems.

This document is updated on the first day of each month. If you are using a copy more than one month old, download the latest version.

How to Use This Document

Information is divided into categories based on the following device formats:

- 4&8 page commercial CTP

- VLF Commercial CTP

- Newspaper CTP (Standard resolutions of 1200 dpi and 1270 dpi)

- Newspaper CTP (Commercial resolutions of 2400 dpi and 2540 dpi)

Each category is further divided based on device types and automation options.

Find the requested device configuration in the appropriate table and look for the requested plate in the plate list. The intersection of the device and plate will have the qualification status. An additional column indicates whether or not the plate can be imaged at the full device specification for the available speed models. The speed models which allow full speed imaging are listed.

Device Configuration Definitions

- AL – Autoloader
- APL – Automatic Pallet Loader
- AU – Auto-Unload
- CL – Continuous Load
- MCU – Multi Cassette Unit
- M – Manual. Equivalent to SA
- SA – Semi-Automatic
- SCU – Single Cassette Unit
- SPL/MPL – Single Pallet Loader / Multi Pallet Loader

Details on automation options can be found in the device specifications.

Note that automation options are unique to a device type. For example, the APL option for the MAGNUS 800 is different from the APL option for the MAGNUS VLF, and each is tested and qualified separately.

Qualification Status Definitions

- Q** – Qualified
This indicates that a plate is fully compatible with a particular device combination.
- L** – Limited Qualification
A plate is qualified on a given device configuration but restrictions apply. Consult the CTP Media Imaging Performance Database for more details.
- NQ** – Not Qualified
This indicates that a plate has either not been tested or has failed the qualification tests for a given device configuration.
- P** – Pending
A temporary qualification status used for new plates that are in the process of being tested or qualified plates whose qualification is about to expire and re-qualification tests have not yet taken place. A plate with a 'Pending' status may continue to be qualified, or its qualification status may change, or it may become not qualified depending on the results of the re-qualification tests. A plate with a 'Pending' status will be supported by Kodak.
- E** – Expired
Indicates that the qualification status has expired. This is equal to Not Qualified. Plates with expired qualification status are periodically removed from this bulletin. A plate that does not appear in this bulletin is assumed to be Not Qualified.

Debris Removal Requirements

Starting with the May 2019 version of the bulletin, debris removal requirements are now displayed. Columns labeled 'UDRC' have been added to each device category. UDRC requirements depend on plate type and device speed.

If some but not all speeds require UDRC with a particular plate, then those speeds will be listed in the UDRC column (for example, X, W). Otherwise, the following are used:

- ALL – UDRC-BP Required on all models/speeds
- NR – UDRC-BP Not Required
- EV – UDRC-BP with External Venting Required
- N/A – plate is not qualified on the device, and/or UDRC is unavailable on the device

Notes

Throughput (plates/hour) can be estimated with the CTP Media Imaging Performance Database; see next section for links.

Screening qualification depends on the specific device configuration and plate type. The screening qualification for a specific device and plate combination in the CTP Media Imaging Performance Database overrides the individual plate and device specifications.

For GENERATION NEWS devices, plates with an asterisk(*) are NOT qualified on dual-head models (Z speed).

W and T speeds are new. Plates may not be qualified for all speed options on a given device. Consult the CTP Media Imaging Performance Database for more information.

Notes

1. Toray TAC-WJ, TAC-GJ, TAC-LJ, TAC-SJ plates have a water wash option for processing; however this significantly reduces plates/hour compared to standard processing conditions.
