

KODAK PROSPER IMAGE OPTIMIZER AGENTS

KODAK PROSPER Image Optimizer Agents improve ink receptivity, rub resistance, and image quality on most types of paper, plastic, and film, and provide improved productivity and efficiency for digital printing on commercial, label, and packaging presses.

PROSPER Image Optimizer Agents are aqueous solutions that enable higher image quality and improve durability on standard, commercially available substrates compared to untreated. Being water-based means simple handling, safe emissions, and less environmental impact.

KODAK PROSPER Image Optimizer Agents provide:

- Lower costs, higher quality, more flexibility, and a safer supply chain than relying on mill-treated substrates
- Outstanding print receptivity on multiple substrates with maximized ink adhesion and durability, including clear surface treatment that shows no discoloration over time
- Compliant options for use in compostable packaging featuring environmentally-friendly water-based chemistry

PROSPER Optimizer Agents contain no environmentally hazardous materials and will comply with OSHA regulations. Complete Safety Datasheet (SDS) on each Optimizer Agent are available.
