

## **KODAK** Computer to Plate (CTP) Life Extension Services

# Make your investment last

### Maximize uptime

Let's face it. Your thermal platesetter from Kodak is aging. Operating systems and software have advanced. Connectivity requirements and technology have changed. Computer hardware components have become obsolete. The net result is that performance may have slipped. KODAK Service and Support can help, with CTP Life Extension Services that restore your KODAK CTP system to maximum productivity.

### Same system, just better

If you could, wouldn't you like to update obsolete components, like replacing SCSI with Gigabit? With CTP Life Extension Services, Kodak's team will replace out-of-date electronics with current versions. A new workstation running a current Microsoft operating system is also included in the package, to bring the machine up to today's specs.

### Consider this ...

Kodak offers additional options to optimize your CTP system. Do you need higher throughput to meet production demands? Are you interested in adding automation to help reduce plate handling, reduce errors and optimize labor costs? Kodak offers a range of automation options, including a Single Cassette Unit (SCU), Multi-Cassette Unit (MCU) or Automatic Pallet Loader (APL).

A variety of service packages in a number of configurations are also available to help you get plates to press faster and run more jobs through production.

### Eligible systems

CTP Life Extension Services are available for KODAK TRENDSETTER 400/800, TRENDSETTER NEWS, MAGNUS 400, MAGNUS 800 and MAGNUS VLF systems. Contact your Kodak rep today to request a customized quote for your CTP device.

### Act now for limited time offer:

**Upgrade before December 31, 2019 and receive a 40% discount.**

Limitations may apply. Talk to your Kodak rep for details.
